1. Heither air activity nor bombing was observed over Gadow-Rossow air force training field from 1 to 10, 21 to 28 November and from 1 to 8 December 1955. The weather was mostly hezy with low ceiling, poor visibility and intermittent rain. The following detailed observations were made:

25X1

25X1

26 and 28 November. One sentry wearing black-bordered blue epaulets was posted at the eastern exit of the village of Gadow. On 26 November, it was learned from talks that EM wearing black-bordered blue epsulets erected high wo den frames on Websberge (Mountains). 29 and 30 November. Deginning at 1900 and 1400 respectively, individual aircraft presumably IL-28s were heard approaching and bombing over Jacon (forest sub-district). The approach flights were made at intervals of 15 to 20 minutes throughout several hours, at altitudes 25X1 between 3,000 and 4,000 meters. The weather was forgy and rainy,

25X1 When entering the bomb range in Jagen 70 it was observed that the target circle, about 50 meters in diameter, consisted of a 30-cm high wall, with a pole about 5 meters high in the middle of the wall. A 25X1 cable with small sockets in which small bulbs about 20 cm apart were fitted was wound around the rod from the top to the bottom where the cable terminated in a dug-in metal box with lid. he box contained a battery presumably of 24 volts.

The following periscopes were observed on the bomb range:

25X1

2 periscopes located side-by-side and close to one another at the eastern end of Jagen 53 of Neuendorf state forest.

2 periscopes located side-by-side and close to one another at the

western end of Jagen 54 of Neuendorf state forest. 8 periscopes about 3 meters apart and arranged in a line almost in the middle of Jagen 61 and 62 of Newendorf state forest. It could not be determined if additional pariscopes were avail ble in the area, 2

Throughout the day on 30 November 1955, bombing was practiced from MiG-15s at irregular intervals. The aircraft mostly flew individually at a high altitude and usually could not be recognized through a layer of haze. Each plane dropped one small bomb 70 cm long and 50 cm in circumference. 3
